These hydro-graphic analyses underscore the need to incorporate antecedent Sabinal ( USGS 08198000 ), Hondo Creek near Tarpley ( USGS conditions in any model to simulate water levels. 08200000 ), and Helotes Creek at Helotes ( USGS 08181400 ) were 13, 4, and 0. 01 cubic feet per second, respectively; whereas, the average streamflows at these sites during event 2 Linear Regression were 54, 39, and 8 cubic feet per second, respectively. Water-level-recession hydrographs were generated to indi-Linear regression equations were developed to estimate cate whether recession rates were similar during periods of no water levels at selected wells using data available on a near rainfall at a given well and whether a simple relation could be real-time basis, such as water levels from nearby wells, rainfall, developed to simulate water-level response to no rainfall. and streamflow....
